Texas: The (Near) Totality
Page 20

Progress Report: Beacon Developments
What’s next for five major projects in city
By Jeff Simms
As the Beacon City Council considers a temporary ban on residential construction, several notable developments are either underway or working their way through the Planning Board’s review. These five represent 536 of the 971 units approved or under review by the city.

Medical Marijuana Takes Off
But unclear if any Highlands doctors ‘certify’ patients
By Chip Rowe
New York State continues to ease its restrictions on medical marijuana, hoping to add more patients to a registry of those who can consume the drug for a limited number of severe illnesses. The number of patients jumped nearly 75 percent after the state Department of Health approved its use three months ago for chronic pain.

Airbnb Bookings Jump 75 Percent in Philipstown
But home rental boom raises legal questions
By Liz Schevtchuk Armstrong
As tourism has surged in Philipstown, so has one form of tourist accommodation: Airbnb, the booking site that lets homeowners turn their residences into bed-and-breakfasts — without the breakfast.

TALL ORDER — Late night on Aug. 7, a tug pulling an 8-million-pound Heat Recovery Steam Generator down the Hudson River, destined for a power plant in Sewaren, New Jersey, passed the Highlands. The generator, which is 126 feet high, passed beneath the Newburgh-Beacon Bridge with 9 feet to spare. The Bear Mountain Bridge was easier, with 29 feet of clearance. The generator is shown earlier in the day as it passed Esopus Meadows near Staatsburg.
The Republican would have remained on the ballot had a Democrat not objected.

Five Questions: Dick Timmons
By Alison Rooney

Timmons, 64, will retire on Aug. 31 after 14 years as director of facilities and transportation at the Garrison School.

What was your first job?
I worked for 28 years at my father's sign business on Main Street in Peekskill. I built frames, painted the wood, dug post holes, sold signs. I later worked in construction in New York City. But I grew up in Cold Spring and wanted to be closer to home.

What did you find at the school?
No one had been in the position for a year, after Murray Prescott retired. The addition had just been built, but not everything was finished. Everyone was a little overwhelmed. My experience in construction served me well in getting things organized. I worked 16-hour days that summer.

What is the largest misconception about the job?
That it's only custodial. Depending on the season, a typical day could begin with slush, snow and ice removal, removing branches, fixing broken windows, unlocking doors, checking ventilation. I also listen. You get attuned to the building. After so many years, I can hear when the water isn't flowing correctly, for example.

What tasks did you take care of during the school year?
Anything from a broken pencil sharpener to broken glass, issues with the security cameras, counting the seconds and measuring building clearance during fire drills (the building can be cleared in 54 to 57 seconds) to 500 other things. I also do site manager work, such as working with vendors, electricians, ordering the fuel oil and projects such as an automated system that allows me to adjust the temperature in each room through my computer, which helped us reduce fuel consumption by 25 percent.

Why did you choose to retire?
I feel like I got the school to move from the 19th century to the 21st with its facilities. We're in a good place. I don't need to be here anymore. I have a 5-month-old grandson to play with, and there's always something to fix at The Nest [the Cold Spring childcare center run by Timmons' wife, Sandy]. We also have a place upstate, a farm that has been in my wife's family for 100 years. We've spent 25 years working on it and it just needs one more coat of paint.

Dr. Chip Rowe: Sheriff Candidate Back on Ballot
Putnam judge rules petition valid
By Chip Rowe

A Putnam County judge overruled objections filed against the nominating petition of Andrew DeStefano, a Republican candidate for Putnam County sheriff, who will now challenge incumbent Don Smith in a Sept. 12 primary.

The winner will face Robert Langley Jr., the Democratic candidate, in the Nov. 7 general election.

Judge Paul Marx ruled on Aug. 16 that the Board of Elections had improperly tossed DeStefano’s petition based on objections filed by Jim Borkowski, chairman of the Putnam County Democratic Committee.

DeStefano needed 1,000 valid signatures; he submitted 1,302. Borkowski objected to dozens of pages because the witnesses had not filled in their town or county. (Asked why the Democrats would not want Smith to face a primary opponent, Borkowski said his objection was about preserving the integrity of the election process.)

DeStefano argued that the lack of a town or county was a technicality and called the board’s decision “an abuse of discretion.” Judge Marx agreed that the lack of a town or county did not invalidate the pages. Although he upheld 194 of 195 objections to individual signers, the decision left DeStefano with 1,108 signatures, enough to get him on the ballot.
The $10 Million Women
Two Cold Spring planners land big grant for city of Hudson

By Alison Rooney

Say you had $10 million to make improvements to a small town. What would you choose, and why? How would you make it happen?

That is the challenge presented by the Downtown Revitalization Initiative (DRI), a state program in its second year. Municipalities are invited to submit proposals; from the more than 100 received this year, a committee chaired by Secretary of State Rossana Rosado chose 10 and presented each with $10 million.

The City of Hudson was one of the 10, thanks in large measure to two Cold Spring planners it hired to craft the 48-page proposal. Juhee Lee-Hartford of River Architects led a team that did the design work, and Kathleen Foley wrote the grant. Both said that not being residents of Hudson but living in a similar river town helped them understand the challenges.

Launched in 2016, the state’s Downtown Revitalization Initiative is a collaboration with 10 Regional Economic Development Councils to identify downtowns that could be jump-started with a relatively small investment.

Three years ago, Lee-Hartford and her husband and partner at River Architects, James Hartford, learned that Hudson officials had asked for bids for a study of how to adapt a mothballed 19th-century lumber warehouse.

The couple formed a team to respond, which included Foley’s firm, Mirador, which specializes in preservation planning. Another firm got the job, but one of the evaluators, Sheena Salvino of the Hudson Development Corp. (HDC), contacted River Architects and Mirador when the DRI put out its call for downtown proposals. HDC and the Economic Development Corp. of Columbia County funded the grant writing.

“We thought we’d be more-or-less just updating the [warehouse] grant application,” Lee-Hartford explained, which prompted a laugh from Foley.

What ensued was a round-the-clock, months-long endeavor, which included site visits, council meetings and research. “It was exhausting but super fun,” says Foley. “Working with Juhee, even if we’re working frantically side-by-side, we have a mind meld and my theoretical matches with her visual.”

One challenge was keeping their ideas with “municipal reality,” which meant poring over the city code. They also held public meetings to get feedback from the community.

Of the $10 million grant, the first $300,000 will fund a planning process to decide how the balance will be used.

$10 Million for Cold Spring or Beacon?

How about Cold Spring or Beacon? Could either also get a DRI “downtown identification” grant among the requirements in a four-page list of criteria:

- should be compact, with well-defined boundaries.
- must be a livable community for diverse populations, including in income and age.
- have recent or pending job growth in or near the area.

The municipality should:
- be able to capitalize on private or public investment in properties, including affordable housing.
- have business improvement districts or partnerships with nonprofits.
- have investments in arts and cultural institutions.
- have the ability to implement policies that increase livability and quality of life through zoning and parking, energy efficiency and management structure.

Folks now see that Hudson is ready.”

PHILIPSTOWN BUSINESSES TO RAFFLE OFF BASKETS TO HELP ST. MARY’S CHURCH

In an effort to raise money for St. Mary’s Church, over 30 businesses in Philipstown have donated gift cards, merchandise and services which have been assembled into four gift baskets – each worth over $600.

One basket will be raffled off every two weeks – the first on September 2nd. Tickets, at $2 each, may be purchased at the following Main Street businesses: C & E Paint Go Go Pops Cupoccino The Country Touch The Country Goose

If you’d like to make a tax deductible monetary donation, checks made payable to St. Mary’s Church may be dropped off at one of the above Main Street businesses.
Collecting names

In your report of Aug. 11 ("Council Member Back on Ballot"), reporter Jeff Simms incorrectly stated that Beacon City Council candidate Omar Muhammad will not appear on the Democratic line of the Sept. 12 primary ballot because one sheet of signatures on his nominating petition was thrown out, leaving him short of the 63 names he needed.

In fact, there were a seven sheets of signatures on Ali T. Muhammad’s consolidated nominating petition, in which he collected signatures for both himself and Harper, that were invalid because Muhammad failed to include Harper’s name on the cover sheet. There were also 10 sheets of signatures for Darrell Williams, a candidate for Ward 4 City Council, that were invalidated for the same reason. Harper and Williams supported Muhammad by running with him, but Muhammad is not supporting them by failing to file their petitions properly.

Mary Gault, Beacon

As a new volunteer with the Beacon Democratic Committee, I was dismayed to learn that a Dutchess County judge overruled the Board of Elections commissioners who had ruled Muhammad’s petition invalid.

Simms’ report is flawed in claiming that “each objection was reviewed by two county election commissioners (one Democrat, one Republican).” In fact, both commissioners testified that the Board of Elections failed to review the first page of objections due to a clerical error. Yet even without that first page both commissioners found Muhammad to have come up short. Unfortunately, due to errors, omissions and judicial discretion, the judge did not uphold their findings.

That missing page noted 51 objections. Had the judge allowed review of these objections, Muhammad’s petition would have fallen well short of the 220 signatures, or 5 percent of registered Democrats in Beacon, required to appear on the ballot.

While Simms’ article only spoke to the question of printed names versus signatures, he chose to omit objections to names not registered to vote, names of voters registered to other parties and voters not living in Beacon.

The judge also refused to consider sworn affidavits from voters, one of whom swore he had not placed his printed name on the petition, another swearing that while he did sign a petition, it was not Muhammad who witnessed it. Muhammad attested that he witnessed the signing of all signatures, despite these claims to the contrary by voters.

Christian Campbell, Beacon

LETTERS TO THE EDITOR

Letters to the Editor

We welcome letters to the editor, which can be emailed to editor@highlandscurrent.com or mailed to 161 Main St., Cold Spring, NY 10516. As with online comments, we ask that writers remain civil and avoid personal attacks. All letters are subject to editing for length, accuracy and clarity. The writer’s full name, email and phone number must be included, although only the writer’s name and village or city are published. We do not print anonymous letters or those written under pseudonyms.

Taking it to the Street

By Anita Peltonen

Where are you going to see the total solar eclipse?

“Columbia, South Carolina. I want our children to be awestruck by something they didn’t know they wanted to see.”
- John McGrath, Cold Spring

“Westminster, South Carolina. We own land there. Friends are coming to camp. We’ll have 200 tents, live music and some friends are getting married.”
- Elizabeth Hare, Cold Spring, with son Jasper

“Jackson Hole, Wyoming. I’m a once-in-a-lifetime-experience junkie.”
- Phil Adams, Scotia
The editor responds: Gault, who is the corresponding secretary of the Beacon Democratic Committee, asserts that Harper's and Williams' petitions were invalid because only Muhammad's name appears on the cover sheet of their consolidated petitions. In fact, while Gault made that objection, the BOE did not rule on it. Instead, in the case of Williams, it found that he was not a registered Democrat and invalidated the petition on that alone. It is impossible to say how the commissioners might have ruled on the cover sheet. The names are printed on each page of the petitions.

In the case of Harper's Democratic petition for Ward 2, the minutes from the board's review of an objection by former council member Charles Kelly state the commissioners agreed that unspecified "fatal defects" raised by Kelly made the petition invalid. In addition, it noted that one sheet was invalid because the witness lives in Wappinger, not Beacon. We should have noted the petition had already been ruled invalid before the page was tossed and have requested the ruling from the BOE to clarify.

Campbell claims we "chose to omit" facts from our reporting. In fact, Muhammad submitted 298 signatures and many were eliminated for the reasons Campbell states. After a review, the Republican commissioner found that Muhammad had 207 valid signatures and the Democratic commissioner stopped counting after he had invalidated 90. The judge ruled Muhammad needed to show at least 13 of the rules were incorrect. She overturned the rulings on 13 disputed signatures, 13 of which involved printed versus cursive names.

Long-term storage
Your article, "People Power" (Aug. 4), addressed what will be done with the stored spent fuel once Indian Point is decommissioned starting in 2022. Discussing the long-term storage of its used nuclear fuel typically reveals two mutually exclusive beliefs about radiation. One belief is that any amount of radiation is dangerous. The other is that radiation is natural. Too much is deadly, but the right amount is beneficial and not harmful. Whether you start with one belief or the other, the two sides of the debate, not surprisingly, always arrive at different answers. From the "beneficial" viewpoint, start by asking, "What does science and engineering prove is the worst that can happen?" Reactors, including at Indian Point, can have a core meltdown and release radioactive material. This was known from the beginning. The design and procedures were meant to prevent this tragedy, but experience with all technologies taught us to never say never. It was judged that a meltdown would be rare, so the overall risk, spread over years, was in line with or less than other risks society accepts. It happened at Fukushima because the site was not tsunami resistant. A meltdown or fuel damage is caused by the heat from the radioactive atom-splitting parts. Radioactive means decrease with time and eventually reach zero. Years after shutdown the fuel heat is very low, and continues to get lower. This fact does not seem to be acknowledged by those of the "any amount is dangerous" camp. When in dry casks, the used fuel, still in solid form and cooled by the chimney effect, would take many days to overheat. There is more than sufficient time for action to restore air flow. If blasted apart by terrorists, the fuel pellets would lay on the ground being air-cooled. There would be some radiation, but comparing this, years after shutdown, to a meltdown is not based on science. It is politically useful for some. Used fuel in dry casks is safe in storage and shipment.

Howard Shaffer, Enfield, New Hampshire Shaffer is a nuclear engineer and a longtime member of the American Nuclear Society.

Beacon Hoops
As a coach in the Beacon Hoops summer basketball program for over a decade, it was an honor to lend a hand to such civic-minded people as Wayne Griffin and Leaman Anderson ("Beacon Hoops: Two Decades Strong," Aug. 11). These men and their wives started something great for the city of Beacon. Although I hope someone continues the tradition, the program, just like the Griffins and the Andersons, is irreplaceable.

Jerry Jackson Sr., Beacon

My two sons came up through the divisions of Beacon Hoops. My family would bring our folding chairs and sit through many games before and after we watched them play. What a great way to bond with new friends! I lived in Beacon from 1960 to 1970 and went to school with a lot of guys who ended up being involved with the league. Children need rules and structure. They will not admit that, but deep down they crave it.

Thank you to all who participated in Beacon Hoops for their tireless efforts, plus Wayne and Leaman and their wives, who also put in many hours of work.

Thomas Nastasi Sr., Cold Spring

The bridge
It's not the Cuomo bridge! ("First Span of Mario Cuomo Bridge (the New Tappan Zee) to Open Aug. 25," Aug. 11). New Yorkers didn't approve the naming of this.

Christopher Vathke, Cold Spring

Please stop calling it the Cuomo Bridge.

Brian Broche, Peekskill

It's the Tappan Zee Bridge. That's not going to change.

Brett Beigert, Cold Spring

How about calling it the Mario Cuomo Tappan Zee Bridge?

Rose Senenko, Nanuet

Editor's note: Drivers can call it whatever they prefer but the state Legislature approved the name for the new two-span bridge in June. The official name of the old 3-mile bridge, which was built in 1955, is the Gov. Malcolm Wilson Tappan Zee Bridge, after the former Republican governor from Yonkers. Tappan Zee refers to the Tappan tribe of the Delaware/Leni Lenape and the Dutch word zee, which means sea. The state Department of Transportation will reuse most of the Tappan Zee's deck panels, but some are going to upstate counties for $1 each. Chemung County, for example, bought eight to replace two rural bridges.

Progress Report: Beacon Developments (from Page 1)

meeting, scheduled for Sept. 12, although board members indicated in August that the environmental component of the hearings is winding down.

West End Lofts
What's happened: The city sold the 3.14-acre parcel next to City Hall to developer Ken Kearney last year on the condition that he would build affordable housing at the site. The 98-unit project will include 50 affordable artists' lofts and 22 middle-income units. After those 72 units are completed, a third, market-rate building will be constructed. The Planning Board's public hearing on the project will continue at the Planning Board's Sept. 12 meeting.

What's next: Kearney was not able to get funding last year from the state Middle Income Housing Program as he did for similar projects in Poughkeepsie and Peekskill. But the developer said he plans to reapply in October and should have a decision by December. The public hearing on the project will continue at the Planning Board's Sept. 12 meeting.

344 Main St.

What's happened: The 24-unit building, which will have retail space on its first floor, was approved in 2016 and has gone up quickly this summer. It drew attention earlier this year when part of a newly constructed wall extended well into the sidewalk. Crews later removed the section, bringing the wall in line with the neighboring Beacon Natural Market.

What's next: The city and the developer are at odds over where the project’s 24 parking spaces will be located. Sean O’Donnell, who owns 344 Main, also purchased the Citizens Bank building at 364 Main earlier this year — a purchase the city contends he made to create parking for 344.

At the Aug. 14 City Council workshop, attorney Patrick Moore and Beacon Mayor Randy Casale sparred when Moore said that O’Donnell intends to develop the bank building so he can make payments on his $1 million mortgage on the parcel. Parking for 344 Main, Moore said, should come from the city’s inventory of spaces.

475 Main St.

What's happened: The owners of this building have asked the city for a special-use permit to construct seven apartments, along with retail space, within a two-story addition to the existing three-story structure. However, the

board of the neighboring Howland Cultural Center argues the addition would dwarf its historic building and cast shadows that obstruct its natural light. At the Aug. 8 Planning Board meeting, consultants for the developer presented “shadow studies” in an effort to allay such concerns.

What’s next: Taylor Palmer, an attorney for the developer, said the owners are now considering alternatives for the project, including a combination of commercial and retail space without the residential units.

248 Tioronda

What's happened: The 100-unit development received special permit approval three years ago but has yet to break ground, with project attorneys requesting numerous delays as they negotiated for an easement on the Metro-North-owned railroad tracks that run through the property and along Fishkill Creek.

In 2016, the City Council approved a resolution giving the developer 18 months to resolve the conflict with the MTA as well as one with the city over an easement for a 2,000-foot section of the Fishkill Creek Greenway & Heritage Trail — which is planned to run from the Beacon train station to Fishkill Creek and on to the town of Fishkill. The council gave the developers a Jan. 13 deadline to have a building permit in place.

What’s next: The City Council has received a draft of the greenway easement and will review it at a workshop next month. On Aug. 14, Jennifer Van Tuyl, an attorney for the project, told the council that the property will soon be sold to developer Bernard Kohn. Casale speculated that the current owner, Peter DeRosa, requested the delays from the city to buy time while trying to market the property. Van Tuyl said that was not the case.

Dutchess County Supreme Court records show that Kohn sued DeRosa in December for allegedly backing out of an agreement to sell Kohn the 9-acre property (which is two parcels) for $2 million.

To our Philipstown Neighbors:
Save the Cold Spring Cemetery
Stop the Tower!

Homeland Tower, a Danbury-based company, has applied to build a 10- to 15-story cellphone tower directly overlooking the historic and beautiful Cold Spring Cemetery.

This tower would be a desecration of this community landmark.

The application was denied by the Nelsonville Building Department. The applicant is appealing this decision to the Village Zoning Board of Appeals, meeting on August 29th at 8:00 pm.

We urge all citizens of Philipstown to attend this meeting to have their voices heard.

Since space is limited at the Village offices (the planned venue for this meeting), we ask you to email your intention to attend so that we can determine whether an alternate location for the meeting may be necessary.

Please help us stop this insensitive and disruptive tower project.

Frances O’Neill, Chair
Committee to Save the Cold Spring Cemetery
Email: savecoldspringcemetery@gmail.com
Counties Push Prescription Discount Cards

Available free, but don’t work with insurance

By Chip Rowe

Putnam County residents have saved nearly $1.3 million since the county joined a prescription discount program in 2012 and mailed a wallet card to every household in the county, a representative of the company that manages it told the County Legislature’s Health Committee at its Aug. 9 meeting.

Caitlin Carey of ProAct, based in Syracuse, said that 50 counties in the state now offer their discount card to residents.

“I would like to see more people take advantage of this,” said Barbara Scucimarra (R-Philipstown), who chairs the Health Committee.

Dutchess County, meanwhile, partners with the National Association of Counties to offer its residents a discount card. And New York State has teamed up with yet another company, United Networks of America, to provide its own card.

The discount cards, available online, are designed for people who don’t have insurance, or who have high co-pays. The companies that administer them — and there are dozens — negotiate discounts with pharmacies or chains, then earn a fee from the pharmacy each time the card is used.

That’s why the cards are distributed at no charge. The more people that use them, the more fees are collected.

Pharmacies participate in the programs, explained Dr. Richard Sagall at NeedyMeds.com, a nonprofit he co-founded, for a number of reasons. They profit even at the negotiated price, and they might make a sale to someone who would otherwise walk out. It also gets customers into the store and, if another, nearby pharmacy honors the card, keeps them competitive.

The companies who create the cards (ProAct is a subsidiary of Kinney Drugs, a chain based in Gouverneur) market them to municipalities as a way to assist residents with high drug costs.

The discount cards, available online, are designed for people who don’t have insurance, or who have high co-pays.

Even if someone has insurance, card marketers encourage them to ask pharmacists to run prescriptions through on the discount card to see if they cost less than the co-pay. The card also is useful, they say, if a drug is not covered by insurance because the consumer gets the negotiated rate.

ProAct and other card companies have also signed up vision and dental services, hearing aid providers, gyms and other health providers to offer discounts.

Residents of Putnam County may obtain a ProAct discount card at proactrx-savings.com or by calling 877-776-2285. In the Highlands, Drug World of Cold Spring participates.

In Dutchess County, residents can obtain a card at narorx.org, or by calling 877-323-2651. In Beacon, Rite Aid at 320 Main St. and Vogel Pharmacy at 234 Main St. participate.

The New York State discount card, available at newyorkrxcard.com, is accepted at Rite Aid in Beacon and Walmart in Fishkill.

Drugstores often offer their own cards. Rite Aid, for instance, has a loyalty program that provides 15 percent off many drugs.

Holly Crocco contributed reporting.
Philipstown Concerned About Route 9W Hotel

Also: illegal dumping, Manitou Station Road, herbicide spraying

By Liz Schevtchuk Armstrong

Convening on Aug. 10 for its formal monthly meeting, the Philipstown Town Board looked toward a major building project across the Hudson River and into illegal dumping and roads in its own backyard.

Route 9W hotel

The board discussed a request that Philipstown agree to make the Town of Highlands the lead agency to review a proposed four-story hotel and restaurant complex on Route 9W in Fort Montgomery, on the west side of the Hudson. Philipstown was one of several government jurisdictions, on both sides of the river, contacted as part of the environmental quality review process.

After debate, the board approved the request 4 to 1, with Councilor Nancy Montgomery voting nay. Usually, such requests from sister communities quickly receive unanimous consent.

"It's a big project which will have a lot of impact on our viewshed," said Supervisor Richard Shea. "However, there's not a whole lot we can do about their being lead agency."

Michelle Smith, executive director of the Hudson Highlands Land Trust, said her organization and Scenic Hudson will analyze the project. She noted a second, five-story hotel is planned along Route 9W.

Montgomery described potential light pollution as a big concern to Philipstown. "I can't see voting to authorize" a lead agency, given the lack of details in the environmental assessment form, she said, suggesting the board make "more of an impression" by refusing to go along.

Councilor John Van Tassel, who also found flaws in the environmental assessment form, said Highlands officials would "be more willing to cooperate" and address concerns if Philipstown signed off on the lead-agency request.

Illegal dumping

The board signaled a zero-tolerance policy toward illegal dumping.

Shea explained that "an industrial-sized operation" by a carting company and excavator targeted "sort of vulnerable individuals, saying, 'Look, we can extend your yard with clean fill.'" Instead, he said, they dumped thousands of yards of material resembling debris from demolished buildings, "absolute trash," that must now be removed from "pretty difficult spots to get it out of. I feel sorry for the people who were duped."

"If you dump in this town, we're going to come down on you hard and heavy." - Richard Shea

The state Department of Environmental Conservation (DEC) has gotten involved and the dumpers will be prosecuted and should be forced to remove the mess, Shea said. "If you dump in this town, we're going to come down on you hard and heavy," he said.

Councilor Michael Leonard observed that "it creates a serious environmental hazard, groundwater potential problems," and difficulties for neighbors, especially on steep slopes. He urged residents to immediately report suspicious dumping or fill activities.

Manitou Station Road

Board members voiced frustrations about the DEC’s pace in issuing a permit for repairs to flood-prone Manitou Station Road. The town cannot proceed without it. The board had hoped to begin work before the fall.

Separately, Putnam County has submitted a grant request to the state for $250,000 to restore the aquatic habitat on Manitou Station Road. Montgomery extended her thanks to the county for pursuing the grant. "It'd be great to partner with them," she said.

Shea complained, though, that county officials have done little about Manitou Station Road except "talk, talk, talk."

Herbicide spraying

Leonard reported on a meeting he attended on Aug. 9 at which county legislators discussed spraying by the county of herbicides near Foundry Brook, the source of drinking water for Cold Spring and Nelsonville.

"I got a little bit upset," he confessed. "I expected to go over there and hear they were going to stop it."

Instead, he said, the county Highway Department described the spraying as a "best practice" in weed control.

"Spraying was occurring atop the actual waterway," Leonard said. "They don't need to spray. We have to stand up and say 'we're not allowing it.'"

Comprehensive plan

In other business, the board voted 5-0 to form a committee to update the 11-year-old Philipstown comprehensive plan.
The Calendar

Week of Revolution: Back to the Beginning

From left: Nance Williamson, Amelia Pedlow, John Tufts and Chris Thorn in HVSF’s The General From America

Groups team up to share engaging local history

By Alison Rooney

I’ll be all Benedict Arnold, all the time, during the Week of Revolution in Philipstown beginning Sunday, Aug. 27.

The Putnam History Museum, Hudson Valley Shakespeare Festival, Boscobel, West Point Museum, Constitution Island Association and Hudson Highlands Land Trust will present eight days of performances, a hike, a military reenactment, trivia contests, food samplings, a boat tour, a treasure hunt, a singalong and panels and talks.

The idea came from an HVSF reading in 2015 of The General from America, the Richard Nelson play being performed by HVSF under its Boscobel tent. Putnam History Museum Chair Preston Pittman and immediate past Chair Jennifer Mercurio attended and brainstormed with HVSF Managing Director Kate Liberman about how the organizations could team up when the play came to Boscobel in 2017.

On Aug. 27 at Boscobel hosts a military reenactment from 11 a.m. to 4 p.m. with camps from the Revolutionary period, the War of 1812 and the Civil War. It will include formations, artillery and drills, and Gen. George Washington inspecting his troops. Tickets are $11 for visitors 15 and older, $5 for children and teens ages 6 to 14, and free for those ages 5 and younger. A family package is available for $30.

Also that Sunday (and continuing daily on Wednesday, Aug. 31), from 11 a.m. to 5 p.m., the museum hosts its exhibit, Treason! Benedict Arnold in the Hudson Highlands. Members and children ages 12 and younger are admitted free; otherwise, admission is $5 for adults and $2 for seniors, members of the military and students.

Later in the day, at 6:15 p.m., Alison Pataki, a Garrison native, will discuss and answer questions at Boscobel on her bestselling historical novel, The Traitor’s Wife, about Benedict Arnold’s wife, Peggy Shippen. The character also appears in The General from America, which follows the talk at 7:30 p.m. The play also will be performed on Aug. 30, Sept. 1 and Sept. 3. “Local history buffs will think about the history of this area differently after seeing it,” says Liberman. “It’s spectacular to see the actors on stage in that venue, wearing Charlotte Palmer-Lane’s costumes, wigs and boots, and then look up to see West Point in the distance.”

On Monday, Aug. 28, HVSF will host a Community Night under its tent designed to appeal to Hamilton fans. An open-mic sing-a-long to the popular musical’s songs, dubbed Hamiltunes, begins with a 5 p.m. sign-up. Boscobel, whose builders, the Dyckman family, were Loyalists, will be open for free tours. Registration is required.

Before the Friday, Sept. 1, performance of The General from America, at 6:15 p.m., Richard Nelson will speak about his play. A ticket is not required to attend the free talk, but registration is recommended at hvshakespeare.org. After the show, there will be a free trivia night for visitors ages 21 and older that will focus on revolution in history, pop culture and literature. A version of the trivia challenge for teenagers will take place at 5:30 p.m. on Wednesday, Aug. 30. Registration is required for either event.

On Saturday, Sept. 2, the Putnam History Museum will present a program called A Bite of History looking at Revolutionary era food. It takes place from 2 to 5 p.m. and includes samples and trivia. Registration is recommended.

Also that day, across the river at the West Point Museum, West Point scholars at 1 p.m. will discuss the Revolutionary War and Arnold’s role in it. The event will be followed, at 3 p.m., by a boat tour of Constitution Island that will depart and return to the West Point dock. Registration through HVSF is essential. The association will offer an additional guided boat tour of the island at 3 p.m. from West Point’s south dock on Sunday, Sept. 3.

The galleries at the West Point Museum have hidden treasures for children to use their decoding skills in finding (pick up a postcard at the gift shop). Visitors also can scope out a replica of the Great Chain, a model of the ship Vulture, and weaponry. Admission is free.

The West Point Museum is located near the Visitors’ Center prior to the Thayer Gate. It is open daily from 10-30 a.m. to 4:15 p.m.

On Thursday, Aug. 31, from 1 to 4 p.m., Boscobel educator Lisa A. Marzo will lead children and a few HVSF performers in Revolutionary War demonstrations, activities and games, including role-playing. Registration is suggested.

On Sunday, Sept. 3, at 10 a.m., storyteller Jonathan Kruk will lead a 90-minute, family friendly hike that follows the footsteps of Washington’s men as they chased Arnold. It is sponsored by the Hudson Highlands Land Trust. Children ages 4-7 (no strollers) can search for clues along Arnold’s Flight Trail in Garrison and assist Washington in tracking the elusive turncoat. Meet in the Philipstown Recreation Center parking lot. Registration required.

More details, and links to register, are at hvshakespeare.org/your-visit/audience-enrichment/week-of-revolution.html.
FRIDAY, AUG. 18

Roots and Shoots

The Monarchs Arrive!

*What happens when you are pollinator-friendly*

By Pamela Doan

When I moved to my spot in the woods, there wasn't a lot of landscaping. The few things that had been done seemed designed only to survive the deer. It was overgrown to the point of blocking walkways. The only spots of color were a wild patch of day lilies that harbored snakes and some lovely peonies I'm grateful to have.

What these plants had in common was there aren't any insects, birds, or other wildlife that could use them for habitat or food. The exception is Japanese barberry, which does have birds that will eat its berries, but that isn't a good thing since that helps it spread.

Seven years later, I've spent backbreaking hours reclaiming the patches of ground; in some cases, this involved hiring a backhoe.

This summer I hit a new peak of pollinator- and bird-friendly habitats. I'm even seeing monarch butterflies for the first time, attracted to the butterfly weed (*Asclepias tuberosa*) a.k.a. “the orange one” (the other native milkweed is purple).

One flowerbed is in bloom with stately and long-flowering Rudbeckia and Penstemon varieties and yarrow. A strip of mountain mint, spearmint and oregano is marked with stalks of tiny white flowers. Another area has hyssop, Monarda, milkweed, *Veronica spicata* (speedwells), asters, cosmos and sedums in bloom. The globe thistle, Joe-pye weed, phlox, Echinacea, Coreopsis, hostas, meadowsweet and rose of Sharon blossom from another part of the yard.

In short, everywhere I look, the landscape is alive. I've observed seven kinds of bees and wasps visiting the flowers, hummingbirds stop by regularly, and I'm constantly trying to capture photos of the many butterflies and moths. The goldfinches love the Joe-pye weed and globe thistle. Catbirds are living in a thicket of *Viburnum trilobum*, a native woody plant with red berries that are disappearing fast.

My toddler's idea of a flower is one with a bee or butterfly crawling over it and we have a lot of fun telling stories about them, where they live and why they like the flower.

Seeing the life and vitality of these efforts deepens the joy I feel in what I've created. It also benefits the vegetable garden. My tomatoes, squash, cucumbers, peppers and berries need pollinators and by creating a bountiful place to hang out, I'm guaranteeing a harvest. When it comes to crops, it's "no bees, no food."

Pollinators are responsible for 35 percent of global food production, according to a 2016 report by a group affiliated with the U.N. But nearly 10 percent of bees, butterflies, moths and bats (also pollinators, as well as effective mosquito munchers) are nearing extinction, and monarch butterfly populations have declined so far they have been considered for endangered species status.

The threats to pollinators' survival are numerous and many of the factors are within our control. Adding pollinator-friendly native plants to the landscape is one step (see nativeplantcenter.org). Eliminating the use of pesticides and herbicides is another. Supporting organic crop growers shifts your food dollars away from commercial farms that have eliminated areas for wildflowers and spray their crops with chemicals that poison bees.

Code facts: Cold Spring

Cold Spring’s code considers a bed-and-breakfast to be a “tourist home,” defined as “a dwelling in which overnight accommodations, consisting of not more than three rooms for such purpose, are provided or offered for transient guests for compensation.” It does not mention breakfast.

Before opening a tourist home in a residential district, the code states that property owners must pay $500 and apply for a special-use permit (valid for one year but renewable); provide plans for review by the Zoning Board of Appeals and the Planning Board; undergo a public hearing, and supply one parking place for each guest room. It also restricts tourist homes in residential districts to parcels located along state highways, which in Cold Spring means Route 9D and Route 301. The restrictions on tourist homes in the business district are less stringent.

Despite the proliferation of Airbnb rentals, Cold Spring Village Clerk Jeff Vidakovich said the village has received no applications for tourist homes since late 2015, aside from one later withdrawn.

In 2016, the Cold Spring Code Update Committee proposed that the village redefine “tourist home” as “overnight accommodation,” require that the owner live on the premises; ban renting out any more than three rooms; forbid separate cooking facilities; allow them on streets other than state roads; and require fire inspections.

“Although the current village code does not mention Airbnb, properties that are marketed on Airbnb are equivalent to tourist homes,” said Trustee Marie Earle. “These properties should conform to the current code.” If they fail to do so, she said, it raises the question: What does the village do about it?

“The village is not actively doing anything or attempting to find out where they are, not doing anything to confront the owners,” she said. But when a complaint is received, Greg Wunner, the building inspector for Cold Spring and Philipstown, investigates, she said. Wunner did not respond to requests for comment.

Airbnb last year added a feature that allows neighbors of Airbnb rentals to complain directly.

(Continued on next page)
Airbnb Bookings Jump 75 Percent in Philipstown
(from previous page)

to the company (airbnb.com/neighbors). Categories include noise, parking/trash, general concerns and personal safety.

Nelsonville

Nelsonville’s village code allows “the letting of rooms” to up to two guests at a time, as long as the owner lives in the house. It prohibits cooking facilities in guest rooms, although an owner can offer breakfast or other “board” and allow guest access to the home’s kitchen.

At least three Nelsonville homeowners provide Airbnb rentals for several guests at a time. One, with two bedrooms, can accommodate five guests, for $220 a night; a second accommodates six guests, in three bedrooms, for $350 a night; and the third, with four bedrooms, accommodates up to eight guests, for $550 a night.

Philipstown

Philipstown’s zoning code, last updated in 2011, allows bed-and-breakfasts nearly everywhere, with Planning Board approval. It defines a bed-and-breakfast as “a dwelling in which overnight accommodations not exceeding five bedrooms and breakfast are provided for transient guests for compensation.”

However, the town code also provides for “lodging facilities,” which it defines as hotels, motels, inns, or any “other establishment providing sleeping accommodations with or without dining room or restaurant, excluding establishments for transient guests, with or without board.”

A review of Planning Board records from mid-2011 through July 2017 found no mention of applications for lodging facility approvals or permits.

“How do you have a hotel tax when you don’t even have a hotel?”

Early said that in addition to posing legal questions, opening a tourist home without approval deprives a municipality of income from permits and, unless the host collects sales tax from guests, deprives the state and Putnam County of revenue. That means, she said, that civic projects sales tax could fund must rely on other sources, like property taxes.

Local officials

Andrew Kalloch, a lawyer with Airbnb, said the company advises its hosts “of the need to comply with local laws.” Moreover, he said, “Airbnb supports nuanced regulations and is eager to work with communities across New York state to craft common-sense policies that foster responsible home-sharing.”

Kalloch said Airbnb supports legislation in Albany to “allow Airbnb to collect sales and lodging taxes on behalf of our Empire State community,” as it does in Vermont, Connecticut and Pennsylvania.

Airbnb’s site provides a host’s reference guide to local laws, organized by state and county. It collects a 4 percent hotel, or room, tax for hosts in Dutchess County but not Putnam, which does not have one. Asked about this by the Journal News in 2015, Odell said, “How do you have a hotel tax when you don’t even have a hotel?” She earlier vetoed a bill to ask the state to allow Putnam to impose a room tax because she said it would discourage hotels from building in the county.
Medical Marijuana Takes Off  (from Page 1)

For critics, the 16-month-old program is not expanding fast enough, and the drug is too expensive. One obstacle is that doctors and nurse practitioners who can certify patients can choose to remain anonymous. More than 1,155 doctors and nurse practitioners, including four in Putnam and 22 in Dutchess, have taken a four-hour online course to certify patients, but the public list shows no practitioners in Beacon or Putnam County.

What it treats

The New York law, which went into effect in January 2016, allows residents with certain serious conditions to obtain marijuana in pill or liquid form that be applied to the tongue or inhaled through a vaporizer. The state health department has proposed allowing ointments, lozenges and chewable tablets, which could happen as early as Sept. 23, following a 30-day public comment period.

Kate Hintz, a state coordinator for the advocacy group Compassionate Care NY, says this may have come about because of the addition of chronic pain patients to the program. “They are used to having a variety of medications to choose from,” she says Hintz, who lives in North Salem. “It’s discouraging that it’s not more accessible and affordable, quickly. I know hundreds of patients wanting to buy the products. Can we meet in the middle somehow?”

The only method of consumption specifically excluded under the state law is smoking. Patients also may not grow their own. The state Health Department earlier this month authorized five companies to grow, process and dispense the drug, bringing the total to 10, and expanded the number of dispensaries allowed from 20 to 40. The new firms include Citiva Medical, which says it will open a dispensary in Wappingers Falls, and Valley Agricueticals, which has plans for a dispensary in Dutchess County. State law also allows home delivery, although no companies serve the Highlands.

In addition to chronic pain, the state allows the use of medical marijuana to relieve the symptoms of amyotrophic lateral sclerosis (ALS), cancer, epilepsy, HIV/AIDS, Huntington’s disease, inflammatory bowel disease, Parkinson’s disease, multiple sclerosis, neuropathies and certain spinal cord injuries.

The state health commissioner, Dr. Howard Zucker, has so far declined to approve its use for Alzheimer’s disease, muscular dystrophy, dystonia or rheumatoid arthritis. He also has not approved its use for post-traumatic stress disorder, although a bill to add it has passed the Assembly with support from veterans’ groups.

The chief obstacle for most New York patients, said Hintz, is that the drug is too expensive. “The Health Department likes to talk up the number of registered patients, but how many are actually making purchases, and how many are getting refills?” she said. “I’m being optimistic thinking it’s 50 percent. The medicine is grossly, excessively expensive. I heard from patients who say they could only afford the first 30 pills.”

She cited a patient in the Highlands who has epilepsy and is certified to receive medical marijuana. The dose recommended by her doctor cost her $1,000 a month at the dispensary in Kingston (insurers do not cover the drug). When the woman’s doctor suggested raising the dose a bit, the cost jumped to $2,000 per month, Hintz said. “It’s breaks my heart. Who can afford $1,000 a month?”

Nevertheless, Hintz says she is cautiously optimistic. “New York has vested a lot into its program at this point, and we are moving in right direction,” she said. “But we need to get the medication more affordable, quickly. I know hundreds of patients wanting to buy the products. Can we meet in the middle somewhere?”

Finding a doctor

Once approved by the state to recommend marijuana to patients, practitioners may “opt out” of being identified in a directory posted at health.ny.gov/regulations/medical_marijuana. They also can remove their names from a list accessible by other registered practitioners. Only the Department of Health has the complete roster. Although no practitioners in the Highlands are on the public list, two doctors in Carmel, Dr. George Gorich, who is affiliated with the Putnam Hospital Center, and Dr. Eric Teitel of the Hudson Valley Center for Digestive Health, say online they can certify patients.

In Wappingers Falls, Dr. Gladys Cardenas and two nurse practitioners at Start-New Medical are on the public list, as are three doctors in Newburgh — Dr. Glen Kay of Omni Medical Care, who offers online consults (New York is one of five states that allows this); Dr. Paul Saladino of Cross Valley Health & Medicine; and Dr. Riaz Chaudhry, a pulmonologist.

In denying a Freedom of Information Law request from The Current for a list of practitioners who can certify patients in Putnam and southern Dutchess but are not on the public list, the Department of Health said revealing those names might put lives in danger. It argued that marijuana users who incorrectly believe doctors keep weed in their offices could show up with weapons, citing news reports of armed robberies in California in 2009, 2010 and 2013.

Practitioners who remain anonymous may be exercising due caution for another reason. Marijuana is illegal under federal law. While the Justice Department has taken a hands-off approach, Attorney General Jeff Sessions has asked congressional leaders to overturn a rule that prohibits the agency from prosecuting doctors and patients in the 29 states that allow medical marijuana.

The Fine Print

• Medical marijuana cannot be consumed in public.
• The law expires in 2021 unless renewed by the Legislature. The governor can end the program at any time if he judges it to be a risk to public safety or health.
• Each of the 10 marijuana producers pays a tax of 7 percent on gross receipts. About a quarter of the tax collected goes to the county where the marijuana is produced, a quarter to the county where it is dispensed, 5 percent to the state Office of Alcohol and Substance Abuse Services and 5 percent to the Department of Criminal Justice Services.
Banning Designer Drugs Not So Easy

Dealers stay one step ahead with shifting recipes

By Holly Crocco

P utnam County is making another push to ban the sale and possession of synthetic illicit drugs. But like the compounds themselves, it’s not as simple as it might seem.

During the County Legislature’s Health Committee meeting on Aug. 9, Shannon Brady, a senior deputy county attorney, noted that Westchester County in May banned the sale of synthetic drugs by amending its consumer protection code.

Synthetic drugs, also known as designer drugs, are already illegal in Putnam. But a ban would specifically define the drugs covered by the law. The Westchester statute names particular drugs, such as K2 and Spice, and includes generic descriptions of products marketed as tobacco, potpourri, herbs, incense or aromatics that contain specific chemicals.

Use of these products has been associated with severe agitation and anxiety, seizures, intense hallucinations and psychotic episodes, among other symptoms, according to the American Association of Poison Control Centers, whose members have taken more than 1,200 calls so far this year about synthetic marijuana.

Under the Westchester law, anyone caught selling or possessing synthetic drugs that have the same effect as pot, cocaine, heroin or other illegal drugs faces civil penalties of up to $2,000. A second violation would be a misdemeanor.

However, putting a law on the books in Putnam County isn’t so simple. “We don’t have our laws set up the same as Westchester,” said Brady. “There are a number of areas we would need to hear from in order to get our law focused.”

She suggested bringing together law enforcement, health officials and the Office of Consumer Affairs. Mike Piazza, commissioner of social services and mental health, asked that he be involved, as well.

Pruning is an art

If you are looking for a “natural finish” and do not want to see your ornamentals cut back severely to dead wood, choose artful pruning. Artful Pruning allows your ornamentals to keep looking good.

Artful Pruning gracefully brings your ornamentals back to a more appropriate smaller size.

For an artful, natural finish, call Gregory, the artful pruner, with over 10 years as a career gardener specializing in natural and restorative gardening. 845.446.7465

When the topic was discussed at a Health Committee meeting last year, Joseph DeMarzo, Piazza’s deputy, explained that it would be difficult for the county to come up with an ordinance to ban synthetic drugs because manufacturers change the chemical makeups frequently to sidestep bans.

It also could create liability, he said. For example, if a retailer was cited for selling a product but its chemical compound did not exactly match what was banned, the owner could take action against the county.

“There are so many compounds — you’d have to ban incense,” he said.

While there are state and federal efforts to control designer drugs, the problem — at least in Putnam — is figuring out who would enforce a ban, especially when most of the drugs are sold online.

“The governor made a big to-do about banning synthetic drugs,” said Barbara Scuccimarra (R-Philipstown). “Does he expect the health departments across the state to do it?”

Scuccimarra said it fell on county lawmakers to address the problem. “We have a problem with drugs in this county, and any way we can help with education and enforcement is necessary,” she said.

Fun for Kids at Museum
Putnam History to host story time
The Putnam History Museum in Cold Spring will host a free Morning at the Museum on Tuesday, Aug. 22, at 10 a.m. Children ages 2 to 5 can enjoy a story, crafts and a snack.

The museum is also continuing its series of free Saturday afternoon films. At 3 p.m. on Aug. 19, it will screen West Point: The First 200 Years and on Aug. 26, The Hudson River School: Artistic Pioneers.

In the Moment
Meditation class set for Aug. 29
Ann Herrington and Rick Steinberg will lead a beginner’s mindfulness meditation class at the Desmond-Fish Library in Garrison on Tuesday, Aug. 29, at 7 p.m. The free class introduces the practice of being present in the moment, a natural human process that improves with daily attention. See desmondfishlibrary.org.

Second Community Congress
Scheduled for Aug. 20 at Fish and Game
Philipstown residents are invited to gather on Sunday, Aug. 20, from 2 to 4 p.m. for the second meeting of a process that will result in an action plan to preserve and promote a strong community. The nonprofit gathering will take place at the Garrison Fish and Game Club, 183 S. Highland Road. Email philipstowncommunitycongress@gmail.com to speak; each presenter can take three minutes to present an issue or idea for action.

Visit highlandscurrent.com for news updates and latest information.

Call for Artists
Cash awards for Putnam artists
The Putnam Arts Council will award three cash prizes during a juried exhibit that opens in Mahopac on Oct. 15. The juror is fine art photographer Jill Einfield, known for her knowledge of alternative photographic processes. Artwork must be delivered by Sept. 26. See putnamartsuncouncil.org for guidelines.

Passport Day
Putnam Valley Library to host
Passport agents will be at the Putnam Valley Library on Saturday, Aug. 26, from noon to 4 p.m. to review applications and answer questions. Applications for new passports and renewals will be accepted. For more information about fees and to download forms, visit travel.state.gov. The library’s public computers also can be used to find and print forms.

Museum Director Receives Honor
Will travel to Rome to finish book
Steven Miller, executive director of Boscobel, will travel to Rome in November to complete a book.

Academy in Rome in November as a visiting scholar to complete work on a book about his specialization of deaccessioning, or removing, museum collections. This practice is sometimes controversial, and Miller’s book will address the professional guidelines and ethics involved.

Beacon
Eat Out for Fareground
Restaurant to donate proceeds
The Chipotle Mexican Grill in Fishkill, which opened in July, will donate 50 percent of its proceeds from purchases on Sunday, Aug. 27, between 4 and 8 p.m. to the Dutchess County Fairground Community Kitchen in Beacon.

Dutchess Fair Opens Aug. 22
Second-largest in state
The Dutchess County Fair, the second-largest in the state, will open Aug. 22 and continue through Aug. 27 at the Dutchess County Fairgrounds in Rhinebeck. The fair includes free entertainment such as a petting zoo, racing pigs and dogs that leap into a pool.

Bandstand performances include the Marshall Tucker Band, 3 Doors Down and the (Continued on next page)

Looking Back in Philipstown

By Clayton Smith

100 Years Ago (August 1917)

Putnam County released its draft list of 946 men for the war, with the first 240 names ordered to report to Carmel in groups of 60 for examination. The county’s quota for the first army of 687,000 was 97, although the county Board of Supervisors argued the calculations were incorrect and the number should actually be 67. (Before the end of the month, it was raised to 102.)

On July 30, Elizabeth Parker, an 11-year-old student, drowned in the Hudson opposite the coal dock at Garrison. “By those in the know, it is stated that the river-bed slopes out for a distance of about 20 feet, then breaks off abruptly to a depth of almost 50 feet.”

The Cold Spring Board of Trustees noted it had been instructed to “obtain the numbers of automobiles exceeding the speed limit in the village” to report to the state so it could revoke licenses. The board also gave notice that all dogs found without a muzzle “will be shot by the police officer.”

Dr. Clark informed the Board of Trustees that there were six cases of measles and two cases of whooping cough in the village.

Because of the heat during the first week of August, village businesses closed on Monday, Tuesday and Wednesday.

Jesse Starr and William Conklin were brought before Justice Logan, accused of attacking John Carey while he was milking and leaving him with six long cuts on his head. Officer Reilley placed the accused in Town Hall.

Four men were gathering hay at the Nellie Hustis place when a bolt of lightning struck a locust tree. One man had his shoes knocked off and two were severely burned.

A young woman stopped in town on her way to San Francisco by bicycle. Helen Louise Murphey, 20, is hoping to win $5,000.

A party of picnickers at the foot of Indian Brook Falls were startled when a boulder crashed among them. It had been pushed off the parapet of a private road overlooking the falls.

75 Years Ago (August 1942)

Leland Ryder, chairman of the Putnam County War Savings staff, announced that the U.S. Treasury reported bond sales of $56,670 in Putnam.

The Putnam County War Council requested that radio operators help with the creation of two-way mobile, portable, fixed short-wave radio communication for civilian protection.

50 Years Ago (August 1967)

Pvt. Keith W. Livermore, 19, of Garrison, was killed in Vietnam on Thursday, Aug. 17, according to a telegram received by his parents from the Defense Department.

25 Years Ago (August 1992)

Mayor Roger Chirico and the Board of Trustees approved the design for the restoration of the Cold Spring dock. The mayor also accepted a $24,000 check from Metro-North as part of its first payment toward the project.

Butterfield Hospital opened its new emergency room. The facility is twice the size of the old E.R., with four bays, an isolation room, and a waiting and registration area, each with what staff members describe as “modern, uplifting décor.”

10 Years Ago (August 2007)

A fugitive from California was apprehended in the woods near Putnam Valley on Aug. 10. He was wanted in connection with a brutal home invasion.

Gov. Elliot Spitzer signed the Hudson Valley Community Preservation Act into law on Aug. 15, allowing villages in Putnam County to ask voters to approve the creation of accounts to fund land protection efforts.

On Aug. 18, county sheriff’s deputies discovered a corpse in a wooded area of Garrison. The body is believed to be that of a Manhattan man who was reported missing about two weeks earlier.
Remembering the Eclipse of ’63

By Michael Turton

On July 20, 1963, a total solar eclipse cast its shadow diagonally across Alaska, five Canadian territories and provinces and the heart of Maine before exiting North America over southern Nova Scotia.

I experienced the eclipse as a 13-year-old, standing in the backyard of our family home in Oldcastle, Ontario, just south of Detroit. Although I was standing 640 miles southwest of the totality, it remains one of the most memorable events of my life.

My dad had borrowed a welder’s mask for safe viewing (which is not recommended, as most are not dark enough to protect your eyes). The bright midafternoon light weakened dramatically as the eclipse progressed. It was as though someone had slowly lowered a dimmer switch on the sun.

While the Highlands is 770 miles from the path of the totality on Aug. 21, I’m hoping for a repeat.

A white-light image of the solar corona during totality

The dark pink ribbon in the map at right represents the totality predicted for an eclipse that will take place in April 2024. The light pink stripe, which includes the Highlands, will reach 93 percent.

An eclipse captured in January 2011 from space by the Hinode satellite

DON’T SACRIFICE SERVICE JUST FOR THE LOWEST PRICE, WE OFFER BOTH QUALITY SERVICE AND COMPETITIVE PRICING

• Automatic Oil and Propane Deliveries
• Budget Plans - Service Contracts
• Furnace / Boiler Installations
• 24 hour Emergency Service
• BBQ tanks filled at our site
• Licensed Technicians

Specializing in Buderus and Peerless boilers, wall mounted gas units, as well as other high efficient boilers and furnaces you may prefer

Forecast for Monday: Sunny with 69 Percent Darkness

Partial eclipse will arrive in Highlands at 1:23 p.m.

By Michael Turton

The solar eclipse on Monday, Aug. 21, will be viewed by an estimated half-billion people, but the celestial spectacle will have a distinctly American flavor as it passes from coast to coast. The 70-mile-wide path of totality — the area that will experience a total eclipse and mid-day darkness — will take place exclusively along a line from Oregon to South Carolina.

This eclipse is of particular interest to scientists. It’s also a tourism bonanza. As many as 7.4 million Americans are expected to travel to experience it.

Oregon began promoting itself as an eclipse destination in 2014 and Amtrak quickly filled its $135 roundtrip Eclipse Express from Chicago to Carbondale, Illinois. Hotels in Charleston, South Carolina, which lies in the path of the totality, sold out months ago.

John McGrath, his wife Maureen and their teenagers, Mae and Graeme, are among the Highlands residents headed south to experience the total eclipse. They will watch it unfold from a park in Columbia, South Carolina.

John is enthusiastic about the trip, said Maureen (see Page 4). Her teenagers, by contrast, “are more like, ‘Why are we doing this?’” she said.

Why all the fuss? A solar eclipse is pretty basic. The moon’s orbit will bring it between the sun and Earth. According to NASA, the moon will totally block the sun for as long as 2 minutes, 40 seconds, depending on where you are along the Oregon to South Carolina “path of totality,” where the eclipse is full. That’s no mean feat given that the moon is about 400 times smaller than the sun.

Part of the fascination is due to its infrequency. A total solar eclipse crosses the U.S. about as often as the Chicago Cubs win the World Series. There hasn’t been a coast-to-coast solar eclipse in the U.S. since 1918. A 1979 total solar eclipse affected only the northwest part of the country.

For scientists an eclipse means hard work. While a total solar eclipse is visible somewhere on Earth about every 18 months, many are difficult to study because they occur in remote areas or during bad weather.

What is being called “The Great American Eclipse” will take place over a lot of easily accessible land, enabling the Citizen Continental-America Telescope Eclipse Project to position 68 telescopes along its path.

Much of the scientific attention will be focused on the inner corona, part of the aura of plasma that surrounds the sun. The corona, which can only be observed during a total solar eclipse, is where solar winds and “space weather” powerful enough to knock out power grids originate.

Highlands at 1:23 p.m.

**A Viewer’s Guide to The (Near) Totality**

When is the solar eclipse?

It will begin in the Highlands at 1:23 p.m. on Monday, Aug. 21, and peak at 2:44 p.m. when the moon blocks 69 percent of the sun, according to data from the U.S. Naval Observatory. It will continue for 2 hours and 36 minutes and end here at 3:59 p.m. It is the first total eclipse since 1918 to traverse the entire country.

What if I miss it?

The next total solar eclipse to pass over the Highlands will take place on Monday, April 8, 2024, when at 3:25 p.m. the moon will block 93 percent of the sun. You will only need to drive 220 miles to Syracuse to see 100 percent coverage, rather than 600 miles to South Carolina.

How can I look at it?

You should not look at the solar eclipse without serious eye protection.

Drug World of Cold Spring has a supply of eclipse glasses certified by the International Organization for Standardization to block all but 1/100,000th of the sun’s light. The welder’s mask in the basement won’t keep you safe, either. Even though there will only be 69 percent coverage in the Highlands, you should never remove the glasses while looking at the eclipse.

Where can I watch?

At 1:30 p.m., the Butterfield Library in Cold Spring will host an eclipse-viewing party for students, including science experiments and snacks. Register at butterfieldlibrary.org or call 845-265-3040.

The Desmond-Fish Library in Garrison will have a live stream from NASA Television, with images captured by 11 spacecraft and 50 high-altitude balloons. The library also has 20 pairs of eclipse-viewing glasses to share.

A viewing at Putnam Valley Town Park will provide eclipse glasses. On Saturday, Aug. 19, at 2 p.m., at the Putnam Valley Library, a science teacher will present a family program on solar and lunar eclipses.

During the eclipse, members of the Mid-Hudson Astronomical Association and the Physics and Astronomy Department of SUNY-New Paltz will have telescopes at the Coykendall Science Building at 1 Hawk Drive with solar filters and solar glasses to safely view the eclipse. If you bring a shoebox, you can learn how to make a pin-hole camera to project the image of the eclipse.

Hudson Valley Hikers will ascend Mount Beacon at 12:15 p.m. sharp from the parking lot at 788 Wolcott Ave. See meetup.com/1w/hikers/events/242475448. It will be a fast climb not suitable for beginners.
